This publication is supported in part by Contract No. 75-53867, Department of Health, Health and Welfare Agency, State of California, and by Grant No. 09-P-000001-04-6, Comprehensive Health Planning, Health Resources Administration, Department of Health, Education and Welfare.

PREFACE

This report has been prepared by Comprehensive Health Planning Association of Santa Clara County, Inc. for the purpose of assisting the efforts of the California State Department of Health to develop a process for recruiting sufficient numbers of residential care facilities. Thus, the emphasis of the material developed here is quantitative rather than qualitative. However, it is hoped that the processes suggested in this report will ultimately lead to qualitative improvements in the residential care delivery system.

A Process to Determine Need for Residential Care Facilities was produced only through the cooperative efforts of the entire CHPA staff. In particular, I wish to thank the following people: Mrs. Ruth I. Kaiser for her time and patience with my questions throughout the project and for her editorial guidance; Evelyn E. Wendel for her contribution of typing and re-typing the text and assistance in designing the final format of this report; and to Rita Keefe, graduate student intern from San Jose State University who has dedicated a substantial amount of her agency hours to the completion of this project. Past CHPA personnel who have also contributed to the agency's efforts in the area of residential care are Stan Tillman, Gary Reyome and Carrie Gomez.

A special thanks is given to Ralph Zeledon of the California State Department of Health whose interest and determination in developing an effective system of residential care in this State made the entire project possible.

A note of appreciation is also made to the members of the Residential Care Committee of Comprehensive Health Planning and its Chairman, Peter Taylor, for their input and contribution to my personal understanding of the nature of residential care.

I. INTRODUCTION

With the advent of the Community Care Facilities Act of 1973 (AB2262) the State of California began to develop a comprehensive approach to the system of community-based care. The delivery system component of community care that provides for 24-hour non-medical care to persons in need of personal services, protection, supervision, assistance, guidance, or training essential for sustaining the activities of daily living or for the protection of the individual is known as residential care.¹

The subsequent regulations that were developed by the California State Health Department cover, quite extensively, the licensure and operations of residential care facilities. Yet, the residential care delivery system remains deficient in two related areas of critical importance, namely, systems monitoring and assessment. This report describes a method for monitoring and assessing one aspect of the residential care delivery system.

The abovementioned deficiencies have impeded the States effort "to establish a coordinated and comprehensive statewide service system of quality community care."² This is witnessed by some of the problems that have confronted the California State Department of Health in developing a program for recruitment of sufficient number, size, type, and location of residential care facilities.³

¹California, Administrative Code, Section 80005 (1975).

²California, Community Care Facilities Act, Section 1501(a), (1973).

³Memorandum dated September 24, 1975 from Ralph Zeledon, Community Care Specialist, Continuing Care Services Section, Department of Health, State of California, to Jerome Lackner, M.D., Director of Health, State of California.

- Nowhere in the State is an agency designated by the Department of Health as being responsible for determining the availability of existing residential care facilities and their occupancy.
- Nowhere in the State is an agency designated by the Department of Health as being responsible for collecting data regarding the number of clients needing placement into residential care facilities.
- There appears to be no available method to prevent residential care bedding overconcentration which has lead to hesitancy on the part of many communities from allowing such facilities to be established.

Consequently, there appears to be a lack of planning and management information regarding the residential care delivery system within the State. To assist the State's effort to develop ongoing methods for monitoring and evaluating this system of health care, we have prepared this report to describe how to collect and analyze pertinent data, along with purposeful standardized methods of assessing that data.

The objective of this report is twofold. One is to suggest a method for monitoring the residential care delivery system on a routine basis. The second is to demonstrate a rational process of determining an area's need for residential care beds. The two are related in that the latter necessitates having accurate and up-to-date information concerning the status of the residential care delivery system. Together, the processes of gathering data and creating judgments contribute to the assessment function.⁴

⁴Henrik L. Blum, Planning for Health, (New York: Human Sciences Press, 1974), page 248.

II. PROCESS FOR MONITORING THE RESIDENTIAL CARE DELIVERY SYSTEM

A. PURPOSE

The procedure for developing a data collection method begins with an explanation as to its purpose. It is important to gather specific data, collected on regular basis, utilized in three important ways. First, assessing the current status of residential care resources and services; second, identifying and developing trends or situations where some actions should take place; and third, evaluating changes made in the residential care delivery system which have resulted from planning activities and/or actions taken by agencies.

B. DATA NEEDS

The kind of data needed for assessing, identifying, and evaluating elements of the residential care delivery system is of the following nature:

1. Characteristics of the Facilities
2. Characteristics of Residential Care Clients
3. Utilization Characteristics of the Facilities

1. CHARACTERISTICS OF THE FACILITIES

a. Facility Identification

The name of the facility, or the facility licensee in such cases where the facility has no formal or legal name listed. Also included is the facility license number.

b. Facility Location

The location of each facility is classified by:

- 1) Community location (street address, city and zip code, including telephone number)
- 2) Census tract location

The census tract location of each facility is the most essential piece of data that is collected. Its significance is due to the fact that this piece of information will relate all of the other facility, client, and utilization data to a specific set of population, housing, and geographic characteristics for a given area. Organizing the data by census tracts also allows the data to be easily grouped into larger geographic areas that might exist for related planning purposes (for example, the County of Santa Clara is divided into Statistical Planning Areas, Human Service Areas, Mental Health Districts and Health Service Areas, all of which are groupings of census tracts).

c. Facility Licensed Bed Capacity

The number of beds that is authorized within the licensed facility.

d. Licensing Agency

The public licensing agency authorizing the operation of the facility. This would either be the Facilities Licensing Section of the State Department of Health, or a local public agency authorized by the Department of Health for specified responsibilities, (in Santa Clara County a unit of the County Department of Social Services has been authorized to license certain types of residential care facilities).

e. Type of Ownership

The ownership status of a facility is classified by two categories:

- 1) proprietary; non-profit; or governmental
- 2) individual; firm; partnership; corporation; association; county; or state.

f. Type of Facility

The type of facility is determined by two factors:

- 1) the licensed bed capacity
- 2) a classification scheme outlined in the regulations pertaining to community care.⁵

The facility is considered "small" if its licensed bed capacity is six beds and less or "large" if its capacity is seven and more. The distinction is significant for planning and program purposes as different strategies may be employed to assure an adequate number of beds or avoid overconcentration in a given area.

Community care regulations have developed a classification scheme that identifies a residential care unit either as a "family", "group" or "social rehabilitation" facility. The coding format below developed by the Facilities Licensing Section which combines the two factors is used for data collection purposes.

| | |
|-----|--------------------------------|
| 710 | Small Family Home Children |
| 715 | Small Family Home Adults |
| 720 | Large Family Home Children |
| 725 | Large Family Home Adults |
| 730 | Group Home Children |
| 735 | Group Home Adults |
| 771 | Social Rehabilitation Facility |

⁵ California, Administrative Code, Section 80005(1) thru (7), (1975)

g. Target Group

Target group breakdown for each facility is determined by "group(s) of persons with similar professionally assessed needs based on age, mental, emotional, social or physical capabilities and includes the developmentally disabled, mentally disordered and physically handicapped."⁶

The following coding format developed by the Facilities Licensing Section is used for data collection purposes.

RESIDENTIAL CARE TARGET GROUP "CAPACITY" BREAKDOWNS

| | |
|-----|-----------------------------------|
| 911 | Developmentally Disabled Children |
| 916 | Developmentally Disabled Adults |
| 921 | Mentally Disordered Children |
| 926 | Mentally Disordered Adults |
| 931 | Physically Handicapped Children |
| 936 | Physically Handicapped Adults |
| 941 | Well Children |
| 946 | Well Adults |
| 962 | Alcohol |
| 972 | Drug |
| 954 | Parent-Child |
| 958 | Pre & Post Natal |
| 968 | Ex Offenders |

This scheme, however, may not be precise enough, especially for the facilities serving the developmentally disabled clients. The variety of disabilities that fall into this category⁷ are many and often require very specialized types of facilities. These facilities should be further identified as such through the data collection process.

⁶California, Administrative Code, Section 80023 (1975).

⁷California, Administrative Code, Section 80024 (1975).

h. Ambulatory Status

Each facility is identified in terms of its authorization to accept non-ambulatory clients by the number of beds with non-ambulatory clearance.

Community Care Facilities Regulations define a non-ambulatory person as

"a person who is unable to leave a building unassisted under emergency conditions. It includes, but is not limited to, those persons who depend upon mechanical aids such as crutches, walkers, and wheelchairs. It also includes profoundly or severely mentally retarded persons and totally deaf persons. A "profoundly or severely" mentally retarded person is one who is unable, or likely to be unable, to respond physically or mentally to an oral instruction relating to fire danger and, unassisted, take appropriate action relating to such danger."⁸

i. Target Age Group

The identification of the target age group served utilizes the definitions of "adult" and "child", as set forth in the Community Care Regulations, Sections 80027⁹ and 80029¹⁰ respectively:

| | | |
|------------------------|---|-------|
| 18 + years |) | Adult |
| 6 - 17 years |) | |
| 2 - 5 years, Preschool |) | Child |
| 0 - 0 years, Infant |) | |

⁸California, Administrative Code, Section 80025(c), (1975).

⁹California, Administrative Code, Section 80027 (1975).

¹⁰California, Administrative Code, Section 80029 (1975).

One modification that should be made is the addition of a category for primarily aged clients, 65 + years. Thus, the adult category would be as follows:

| | | |
|------------------------|---|-------|
| 65 + years, Aged |) | Adult |
| 18 - 64 years, |) | |

j. Specialized Services Provided by Each Facility (Optional)

A listing of "specialized services" as explained by Section 80017¹¹ provided by each facility is included in the data. Such services are listed by the categories described in Section 80015¹² and the licensee checks off the appropriate category of specialized services that are being provided.

2. CHARACTERISTICS OF RESIDENTIAL CARE CLIENTS

Data relating to the clients who currently reside in residential care facilities contain the following kinds of information:

- a. The type of client according to the established target group criteria (See l-g);
- b. The ambulatory status of each client according to definitions set forth in Section 80025 of the Community Care Regulations (See l-h);
- c. The client's age;
- d. The client's sex;
- e. The name of the client's placement agency;

¹¹California, Administrative Code, Section 80017 (1975).

¹²California, Administrative Code, Section 80015 (1975).

- f. The name of the agency that is providing the follow-up care for each client;
- g. The geographic origin of the client prior to residing in the present facility, including the date upon which the client came to reside at the facility.

The above data should be supplied by each facility in such a manner as to protect the confidentiality of each client.

3. UTILIZATION CHARACTERISTICS OF THE FACILITIES

- a. The Number of Clients Residing in Facility at the Beginning of the Calendar Year

The total number of clients residing in the facility on January 1 is distributed according to target group designation.

- b. The Number of Clients Admitted to Facility During the Past Calendar Year

This total number is distributed according to target group designation.

- c. The Number of Clients Discharged from the Facility During the Past Calendar Year

This total number is distributed according to target group designation.

- d. The Number of Clients Residing in Facility at the End of the Calendar Year

The total number of clients residing in the facility on December 31 is distributed according to target group designation.

e. The Annual Number of Client Days

The total number of days each client resided in the facility is combined to give an annual total number of client days for the facility.

f. The Annual Facility Occupancy Level

This is determined by taking the annual total number of client days for the facility (Item 3-e) and dividing it by the annual total number of client days possible for the facility. The annual total number of client days possible for a facility is determined by multiplying the facility's licensed bed capacity (Item 1-c) by 365 days.

g. Change in License Bed Capacity

The licensee notes if and when during the past calendar year their license bed capacity changed. This is taken into account when computing the total number of client days possible for a facility.

C. SURVEY AND DATA ANALYSIS PROCEDURE

The above data is collected from each facility, County as well as State licensed, by means of an annual survey report. This annual survey report comes directly from the designated division, section, branch, or program of the California State Department of Health. It is completed by the licensee or administrator of each facility. Upon completion, the survey is returned to a designated entity of the State Health Department. This process occurs during the month of January, on an annual basis.

The need to survey both County and State licensed residential

care facilities necessitates the completion of a master roster by the responsible entity prior to the collection of data. This is completed during the month of December and finalized before mailing out the annual report forms.

To expedite the completion of the annual survey report, the following activities are required:

1. All known data relating to facility characteristics are preprinted on the report form. The licensee or administrator completing the report would simply have to make the necessary corrections of any information that may be in error.
2. To reduce the number of "open" answers, questions should be designed so that appropriate responses can be checked off, circled or otherwise coded. This assists in eliminating confusing and unclear replies. This especially is helpful in completing the section concerning the characteristics of the clients residing in licensed residential care facilities.
3. Facility utilization data are completed using a chart format that displays the requested data per each type of client who resides in the facility.
4. An instruction sheet of how to complete the survey is attached to the annual report form. This instruction sheet clarifies and explains the nature of the information being sought. It also includes, where necessary, a list of appropriate responses for selected questions.

Sample data collection forms are illustrated at the end of this report (see Attachment 1). These prototype forms were developed from the data requirements described above, the experience of working with a similar survey form used in CHPA's "Survey of Licensed Residential Care Facilities in Santa Clara County, June 1975," (see Appendix E, in Attachment 2), and the "Annual Report of Skilled Nursing or Intermediate Care Facility," used by the California State Department of Health.

The accumulated data from the annual survey reports are computer processed and compiled into informational documents by the State Department of Health on a County-by-County basis throughout California. The "Survey of Licensed Residential Care Facilities in Santa Clara County, June 1975," (Attachment 2) demonstrates one method of tabulating and displaying the accumulated data.

Distribution of the data documents is made to Health Systems Agencies, for purposes of local analysis. Appropriate funding for this analysis may be necessary. These health planning agencies are available to assist local licensing agencies in determining the need and location for residential care beds.

The results and subsequent recommendation of the residential care data analysis is then available to local field offices of State Licensing, licensing agencies of local government, health planning agencies, client placement agencies, planning departments of local government and other such community agencies that have an interest in residential care.

III. METHOD OF DETERMINING AN AREA'S NEED FOR RESIDENTIAL CARE BEDS

A. INTRODUCTION

The determination of an area's need for residential care beds is the essential factor in planning for an adequate number, size, type, and location of residential care facilities. The method proposed for determining an area's need for residential care beds uses two factors:

1. The area's required bed need as related to its population.
2. The area's licensed residential care bed utilization rate.

Together, these two factors identify those geographic areas that are:

- Overconcentrated or heading towards overconcentration
- Sufficiently bedded and utilized
- Overbedded or underbedded

Furthermore, they suggest the type of corrective action necessary to alleviate the problems mentioned above for future licensing of residential care beds and for placement of clients.

B. REQUIRED RESIDENTIAL CARE BED NEED

This method for estimating the required residential care bed need for a geographic area requires the use of a beds-to-population ratio. The ratio for a given County is used to arrive at the number of beds needed, or not needed, for a sub-area of the County to achieve the same ratio. The number of

beds required for the subareas is determined by the following formula:

$$\frac{\text{Total Licensed Beds in County}}{\text{Total County Population}} = \frac{\text{Recommended Number of Beds for a Subarea}}{\text{Subarea Population}}$$

Working through the formula, we have:

$$\frac{\text{Total Licensed Beds in County}}{\text{Total County Population}} \times \text{Subarea Population} = \text{Recommended Number of Beds for a Subarea}$$

Subtracting the number of beds licensed in a subarea from the recommended number of beds for that subarea, we arrive at the number of residential care beds required to achieve the County ratio:

$$\begin{array}{rcl} \text{Recommended Number} & & \text{Number of Beds} \\ \text{of Beds for the} & \text{---} & \text{Licensed in the} \\ \text{Subarea} & & \text{Subarea} \end{array} = \begin{array}{l} \text{Required Number of} \\ \text{Residential Care} \\ \text{Beds Needed for} \\ \text{Subarea} \end{array}$$

If the resulting number is positive, this indicates a deficit of residential care beds in that subarea. If the number, however, is negative, this indicates a surplus of residential care beds. This process is illustrated at the conclusion of this report.

C. UTILIZATION OF LICENSED RESIDENTIAL CARE BEDS

The second measure necessary in assessing the residential care bed status for a subarea relates to the utilization levels of existing licensed beds. This is determined for a subarea by the summation of the factors relating to annual facility occupancy level (see Section II-3-f) for all residential care

facilities located within that subarea. Facility occupancy rates are determined as follows:

$$\frac{\text{Facility's Annual Total of Client Days}}{\text{Facility's Licensed Bed Capacity} \times 365} = \text{Facility's Occupancy Rate}$$

The utilization rate of the beds licensed within a subarea is thus computed as follows:

$$\frac{\text{Subarea Facilities' Annual Total of Client Days}}{\text{Subarea Facilities' Licensed Bed Capacity} \times 365} = \text{Subarea's Residential Care Bed Utilization Rate}$$

This procedure is also illustrated at the conclusion of this report.

D. SUBAREA'S RESIDENTIAL CARE BED STATUS

Analysis by a matrix illustrates the residential care bed status of any geographic subarea. Contrasting the required number of residential care bed needed against the rate of residential care bed utilization produces the following matrix:

SUBAREA RESIDENTIAL CARE BED MATRIX

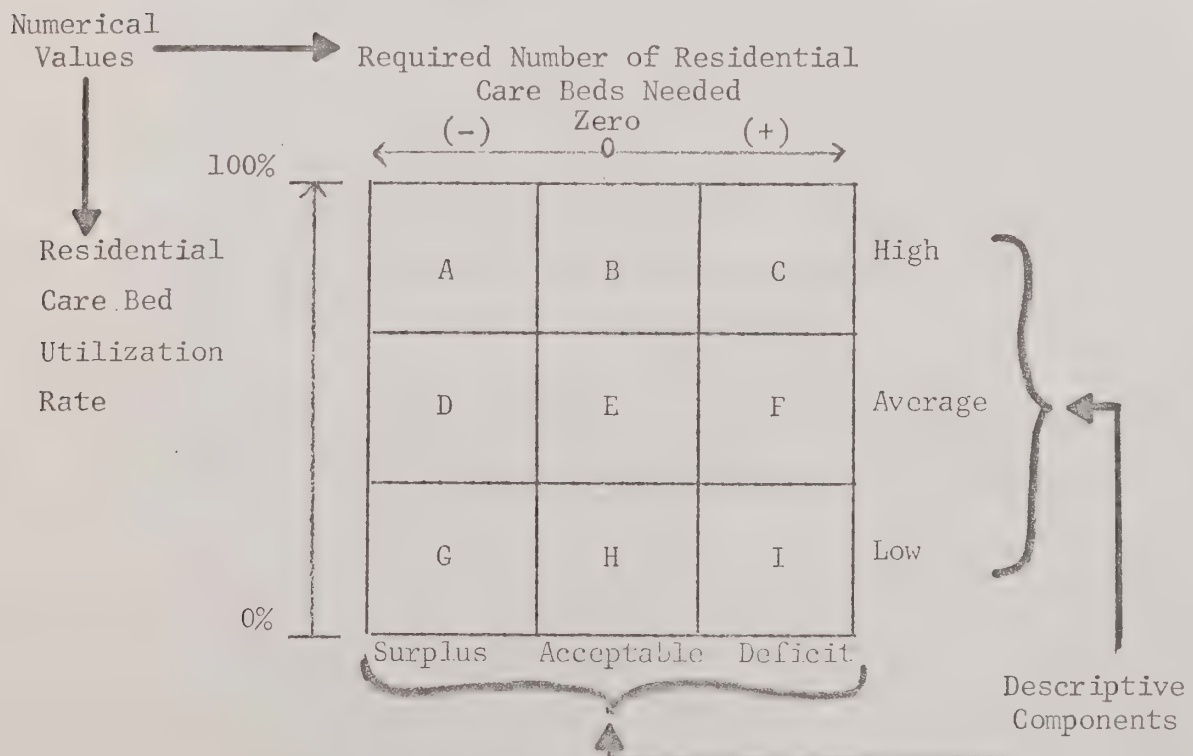

FIGURE 1

Numerical values that result from the previously described formulas of a subarea's bed need and utilization are given on the top and left hand margins of the matrix. The numerical values of bed need ranges from zero to the right for positive bed need. Utilization rates range from zero percentage at the bottom and move upward to one hundred percent at the top of the matrix.

Descriptive components of the two formulas are given on the bottom and right margins of the matrix. Criteria for each component is determined by selected numerical values.

If, for example, the criterion selected for the "acceptable" component is established as + 12 beds, the "surplus" component criterion would be -13 beds or less, while the "deficit" component criterion would be +13 beds or greater. Similarly, if the criterion selected as "average" utilization is between 75% - 85%, then any subarea with less than 75% bed utilization would be categorized as "low". Subareas with bed utilization rates greater than 85% would be categorized as "high".

The selected numerical values used to establish the range of each descriptive component does not need to be the same for all subareas. Instead, a range of numerical values could be used in order to compensate for variations among subareas. The extent of this range would depend upon certain considerations, discussed later on, which should be taken into account when using the formulas of bed need and utilizations.

This matrix analysis provides a process for ascertaining those subareas which have inappropriate numbers of residential care

beds and clients. The matrix in Figure 2 describes 9 different types of residential care bed conditions that could classify subareas depending upon the criteria established for each component.

SUBAREA RESIDENTIAL CARE BED STATUS MATRIX

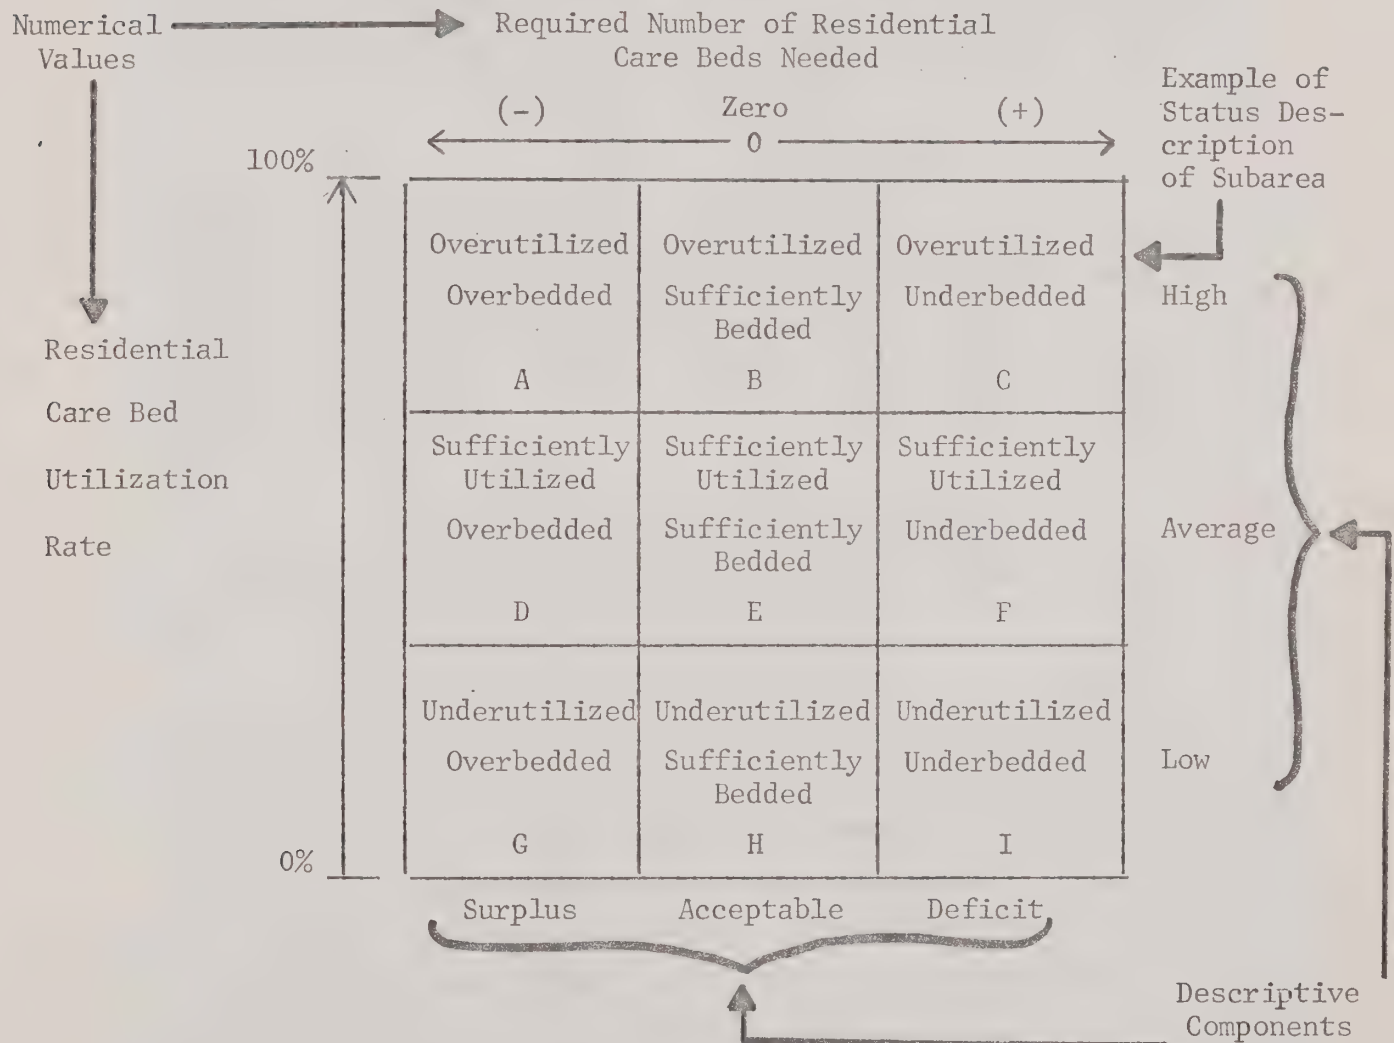

FIGURE 2

The above description for each designated condition also suggests the type of corrective action necessary to assure a sufficient number and balanced distribution of residential care beds and clients within and among subareas. For example, a subarea is considered overconcentrated if it is both overbedded and overutilized, Category A. Placement of clients into facilities located within such a subarea should be curtailed. Furthermore, no new licenses should be issued which would permit an increase in the number of residential care beds into that subarea.

Subarea's that are identified as being Categories B or D are considered as heading towards a condition of overconcentration. In such subareas, the licensing of more residential care beds or further placement of residential care clients, respectively, should be prohibited so as to avoid the pending condition of overconcentration.

Conversely, a subarea that is designated as Category I is in need of both more residential care clients and residential care beds.

While the redistribution of residential care beds and clients among subareas may appear unwieldy, the matrix process allows a system of priorities to be developed. These priorities provide some basic guidelines in reviewing any proposed changes in the location of licensed beds or the future placement of clients. As such, this process helps to assure an adequate number of residential care beds where they are needed.

A change in number of licensed beds is guided by the following priority schedule matrices:

RESIDENTIAL CARE BED LICENSING PRIORITY SCHEDULES

| Increasing the Number of Beds | | | Decreasing the Number of Beds | | |
|-------------------------------|----------------------|----------------------|-------------------------------|----------------------|----------------------|
| 7 th A | 4 th B | 1 st C | 3 rd A | 6 th B | 9 th C |
| 8 th D | 5 th E | 2 nd F | 2 nd D | 5 th E | 8 th F |
| 9 th G | 6 th H | 3 rd I | 1 st G | 4 th H | 7 th I |

FIGURE 3

Thus, for example, the first priority for increasing the number of residential care beds would be in subareas that are identified as being underbedded and overutilized, Category C. The first place to look for more beds are in those areas that are overbedded and underutilized, Category G. When possible, beds in these subareas should, in effect, be transferred to Category C subareas.

This would be done by delicensing those beds that are not being utilized on regular basis in Category G subareas and relicensing the same number of beds in Category C subareas. If for some reason, it is not possible to delicense an adequate number of beds from subareas classified as Category G, other types of subareas should be investigated as possible sources for more beds. The next subareas that should be looked to are those subareas designated as Category D. The search for more beds, if necessary, would then continue following the above priority schedule.

A change in the occupancy status that can be affected by the placement of clients, however, is guided by a different set of priority matrices:

RESIDENTIAL CARE CLIENT PLACEMENT PRIORITY SCHEDULES

| Increasing Client Population | | | Decreasing Client Population | | |
|------------------------------|----------------------|----------------------|------------------------------|----------------------|----------------------|
| 9 th A | 8 th B | 7 th C | 1 st A | 2 nd B | 3 rd C |
| 6 th D | 5 th E | 4 th F | 4 th D | 5 th E | 6 th F |
| 3 rd G | 2 nd H | 1 st I | 7 th G | 8 th H | 9 th I |

FIGURE 4

The client placement priority schedules are demonstrated by the following example. As new clients enter the residential care delivery system, or clients from subareas classified as Category A leave residential care facilities for placement into other residential care facilities, every effort should be made to place them into facilities located within Category I subareas first. If these subareas can no longer take any more clients, the next subareas that should be checked are those classified as Category H. This process continues, if necessary, following the established priority schedule of client placement.

The goal of using the priority schedules for licensing resi-

dential care beds and client placement is to have sufficient numbers of residential care beds and levels of bed utilization in all subareas and thus achieving the status described by Category E. Changes in subareas are effected by using all the priority schedules together.

For instance, a subarea which is underbedded and overutilized, Category C, can be moved towards a Category E status in a two step process. First, a subarea can be moved into the "acceptable" range by increasing its number of licensed beds.

Secondly, and at the same time, the utilization level of the subarea can be dropped from "high" to "average" by limiting the number of clients placed into facilities located within that subarea. Thus, the change in the subarea's residential care bed status has been made due to the fact that while Category C subareas have a high priority for increasing beds, they also have low priority for increasing client population.

It should be evident that as the establishment of residential care beds are the responsibility of licensing agencies and residential care clients are the responsibility of the placement agencies, the processes described above will require a great deal of coordination and cooperation among licensees or administrators, licensing, placement and planning agencies.

E. CONSIDERATIONS OF PROPOSED METHOD

The proposed method for determining residential care bed need requires flexibility in order to be compatible with the real world situation. Certain considerations, related to the suggested formulas of residential care bed need and utilization, must be made when adjusting the numerical ranges of each descriptive component of the matrix.

Initially, the numerical values selected as the parameters of each descriptive component would be established using the judgments of persons involved with the residential care delivery system. These values should be tested and analyzed over a period of time as to their appropriateness and effectiveness in assuring an adequate number of residential care beds for all types of clients.

The specific numerical values that determine the component ranges of the required number of beds needed and bed utilization rates could be adjusted depending upon:

1. the target group utilizing residential care beds;
2. the facility size where the beds are located; or
3. both.

Various target group categories could effect the values selected and thus the residential care status of a subarea in two ways. First, the number of requires beds needed in a subarea would vary if an area's beds-to-population ratio was computed on the basis of the number of licensed residential care beds designated for each target group rather than on its total number of residential care beds. The different ratios for every target group would be used to review each subarea as to whether or not they had appropriate number of residential care beds for each target group.

Second, the utilization levels of residential care beds would differ among the various target groups. This results from the fact that each target group would have a different average length of stay. For example, the target group known as "well adults," which are primarily aged, would tend to have a longer length of stay in a facility than residents of a drug or

alcoholic rehabilitation facility. With longer lengths of stay the utilization levels tends to rise as there are less available days in which a bed could remain vacant.

The size of the facility also accounts for the values selected in determining the component ranges of bed need and utilization. The distinctions between small facilities, those licensed for six beds or less, and those licensed for seven beds or more, large facilities, are related to the economic feasibility of their operation. Among the many factors related to the economic feasibility of operating a residential care facility are geographic location and level of bed utilization.

The economic impacts of the geographic location of a residential care facility are related to items like the cost of the physical structure, which includes financing costs, property taxes, and utilities. These expenses would vary for similar types and sizes of facilities among different subareas. Thus, certain types and sizes of residential care facilities may be economically feasible only in particular geographic locations. We would recommend that a definitive study, with supporting data, be conducted regarding the impacts of operational and fixed costs upon the establishment of various types and sizes of residential care facilities. The data from this study would assist in setting appropriate numerical values per size and type of facility that would be used to determine the components of required beds needed and bed utilization for different geographic areas.

Appropriate levels of bed utilization would differ among the size of residential care facilities. For example, if a five bed facility has one vacant bed for an entire year, the utilization rate is 80%. However, for a twenty-bed facility,

an 80% occupancy factor means that four beds are permanently vacant for the year.

Another way to illustrate the distinction between occupancy rates of the small and large facilities is by the following table which shows the occupancy rate for licensed bed capacities of two through 25 beds when there is just one vacancy.

OCCUPANCY RATE FOR LICENSED BED CAPACITIES OF 2 THRU 25
BEDS WITH JUST 1 VACANCY

| <u>LICENSED BED CAPACITY</u> | <u>OCCUPANCY</u> | <u>OCCUPANCY PERCENTAGE</u> |
|------------------------------|------------------|-----------------------------|
| <u>Small Facilities</u> | | |
| 2 | 1 | 50.0 |
| 3 | 2 | 66.7 |
| 4 | 3 | 75.0 |
| 5 | 4 | 80.0 |
| 6 | 5 | 83.3 |
| <u>Large Facilities</u> | | |
| 7 | 6 | 85.7 |
| 8 | 7 | 87.5 |
| 9 | 8 | 88.9 |
| 10 | 9 | 90.0 |
| ⋮ | ⋮ | ⋮ |
| 15 | 14 | 93.3 |
| ⋮ | ⋮ | ⋮ |
| 20 | 19 | 95.0 |
| ⋮ | ⋮ | ⋮ |
| 25 | 24 | 96.0 |

FIGURE 5

As illustrated in Figure 5, the same number of vacancies in facilities of varying bed capacities will result in different levels of occupancy. Thus, to require an 85% or 95% average occupancy ratio, as is done in acute care facilities, is unrealistic, especially if a majority of beds are in small facilities.

The factors discussed above suggest therefore that a number of matrices be produced and utilized for determining the need for all residential care facilities. For each target group of clients two matrices would be developed, one for small facilities and one for large facilities. However, a single matrix should be used initially as the process outlined in this report is new and untried.

Those factors mentioned in this section should be investigated further so as to make the proposed method for determining residential care bed need an effective means for achieving the State's mandate of establishing "a coordinated and comprehensive statewide service system of quality community care."¹³

F. ILLUSTRATION OF PROPOSED METHOD

The proposed method of determining the need for residential care bed is illustrated by the example below. It should be noted, however, that this proposed method, as demonstrated below, is presented on a theoretical ideal basis. As suggested previously, implementation of this process should be tempered with the realities of the existing condition in the residential care delivery system. Clients cannot and should not be shuffled

¹³California, Community Care Facilities, Section 1501(a), (1973)

among subareas just for the purposes of meeting the established standards of utilization. By the same token, certain economic factors should be considered before delicensing beds as facilities represent an investment by those who have committed themselves as providers of a distinctive level of health care. Again, we repeat that the illustration below is a highly theoretical example of the proposed method of determining an area's need for residential care beds.

A county with a population of 220,500 has a total of 900 licensed residential care beds. Annually reported residential care data reveals the following information concerning the four subareas of the County.

SAMPLE COUNTY SUBAREA RESIDENTIAL CARE DATA

| Subarea's Number | Subarea's Population | Subarea's Licensed Residential Care Beds | Subarea's Annual Licensed Bed Capacity | Subarea's Annual Number of Client Days |
|---------------------|-------------------------|---|---|---|
| 1 | 58,200 | 254 | 92,710 | 52,874 |
| 2 | 76,400 | 102 | 37,230 | 31,390 |
| 3 | 67,700 | 443 | 161,695 | 119,276 |
| 4 | 18,500 | 98 | 35,770 | 33,910 |

FIGURE 6

Upon determining the County's beds-to-population ratio of .00408, computed as follows:

$$\frac{900}{220,500} = .00408, \text{ or } 4.08 \text{ beds per } 100,000 \text{ population,}$$

we can determine the required number of residential care beds needed in each subarea to achieve that same ratio as shown in Figure 7.

SAMPLE COUNTY SUBAREA RESIDENTIAL CARE BED NEED

| Sub-area No. | County Beds to Population Ratio | x | Sub-area Population | = | No. of Recommended Residential Care Beds for Subarea | - | No. of Residential Care Beds Licensed in Sub-area | = | Required No. of Residential Care Beds Needed for Subarea |
|--------------|---------------------------------|---|---------------------|---|--|---|---|---|--|
| 1 | .00408 | x | 58,200 | = | 238 | - | 254 | = | -16 |
| 2 | .00408 | x | 76,400 | = | 311 | - | 102 | = | 209 |
| 3 | .00408 | x | 67,700 | = | 276 | - | 443 | = | -167 |
| 4 | .00408 | x | 18,500 | = | 76 | - | 98 | = | -22 |

FIGURE 7

The annual residential care bed utilization rate for each sub-area is computed as follows:

SAMPLE COUNTY SUBAREA RESIDENTIAL CARE BED UTILIZATION

| Subarea Number | Subarea's Annual Number of Client Days | ÷ | Subarea's Annual Licensed Bed Capacity | = | Subarea Residential Care Bed Utilization Rate |
|----------------|--|---|--|---|---|
| 1 | 52,874 | ÷ | 92,710 | = | 57.0% |
| 2 | 31,390 | ÷ | 37,230 | = | 84.3% |
| 3 | 119,276 | ÷ | 161,695 | = | 73.8% |
| 4 | 33,910 | ÷ | 35,770 | = | 94.8% |

FIGURE 8

The residential care bed status of each subarea is then analyzed using the matrix model which relates the subareas required bed need to its bed utilization. The range of required bed need that is considered "acceptable" within the County, for purposes

of this illustration, has been established as ± 20 beds, while the "average" range of bed utilization has been set between 75 and 85 percent. The resulting matrix is therefore arranged in the following format:

SAMPLE COUNTY SUBAREA RESIDENTIAL CARE BED STATUS MATRIX

| | | | | | |
|--|------|---|---|--|---------|
| | | Required Number of Residential Care Beds Needed | | | |
| | | Zero | | | |
| | | <div style="display: flex; align-items: center; justify-content: center;"> ← -20 0 +20 → </div> | | | |
| Residential Care Bed Utilization Rate | 100% | Overutilized Overbedded A | Overutilized Sufficiently Bedded B | Overutilized Underbedded C | High |
| | 85% | Sufficiently Utilized Overbedded D | Sufficiently Utilized Sufficiently Bedded E | Sufficiently Utilized Underbedded F | Average |
| | 75% | Underutilized Overbedded G | Underutilized Sufficiently Bedded H | Underutilized Underbedded I | Low |
| | | Surplus | Acceptable | Deficit | |

FIGURE 9

Using the above matrix, the status of the four subareas is determined.

SAMPLE COUNTY SUBAREA RESIDENTIAL CARE BED STATUS

| Subarea Number | Subarea Required Beds Needed | Subarea Bed Utilization | Subarea Category Status | Subarea Category Description |
|----------------|------------------------------|-------------------------|-------------------------|-----------------------------------|
| 1 | -16 | 57.0% | H | Sufficiently Bedded Underutilized |
| 2 | 209 | 84.3% | F | Underbedded Sufficiently Utilized |
| 3 | -167 | 73.8% | G | Overbedded Underutilized |
| 4 | -22 | 94.8% | A | Overbedded Overutilized |

FIGURE 10

Applying the priority schedules introduced earlier, (Figures 3 and 4) each subarea can be moved towards a status of having a sufficient number of residential care beds and utilization of those beds, Category E.

Subarea 1 needs to increase its bed utilization. This can be accomplished by giving this subarea a priority in future client placement. Thus, as clients leave facilities located in Subarea 4 for placement into other facilities, they should be directed towards the facilities located in Subarea 1.

Subarea 2 needs to increase its number of licensed beds. These beds should first come from Subarea 3 which has a number of beds not being utilized at all. If enough beds cannot be secured from Subarea 3, then as beds become available in Subarea 4, as a result of not replacing those clients leaving, they too should be transferred to Subarea 2.

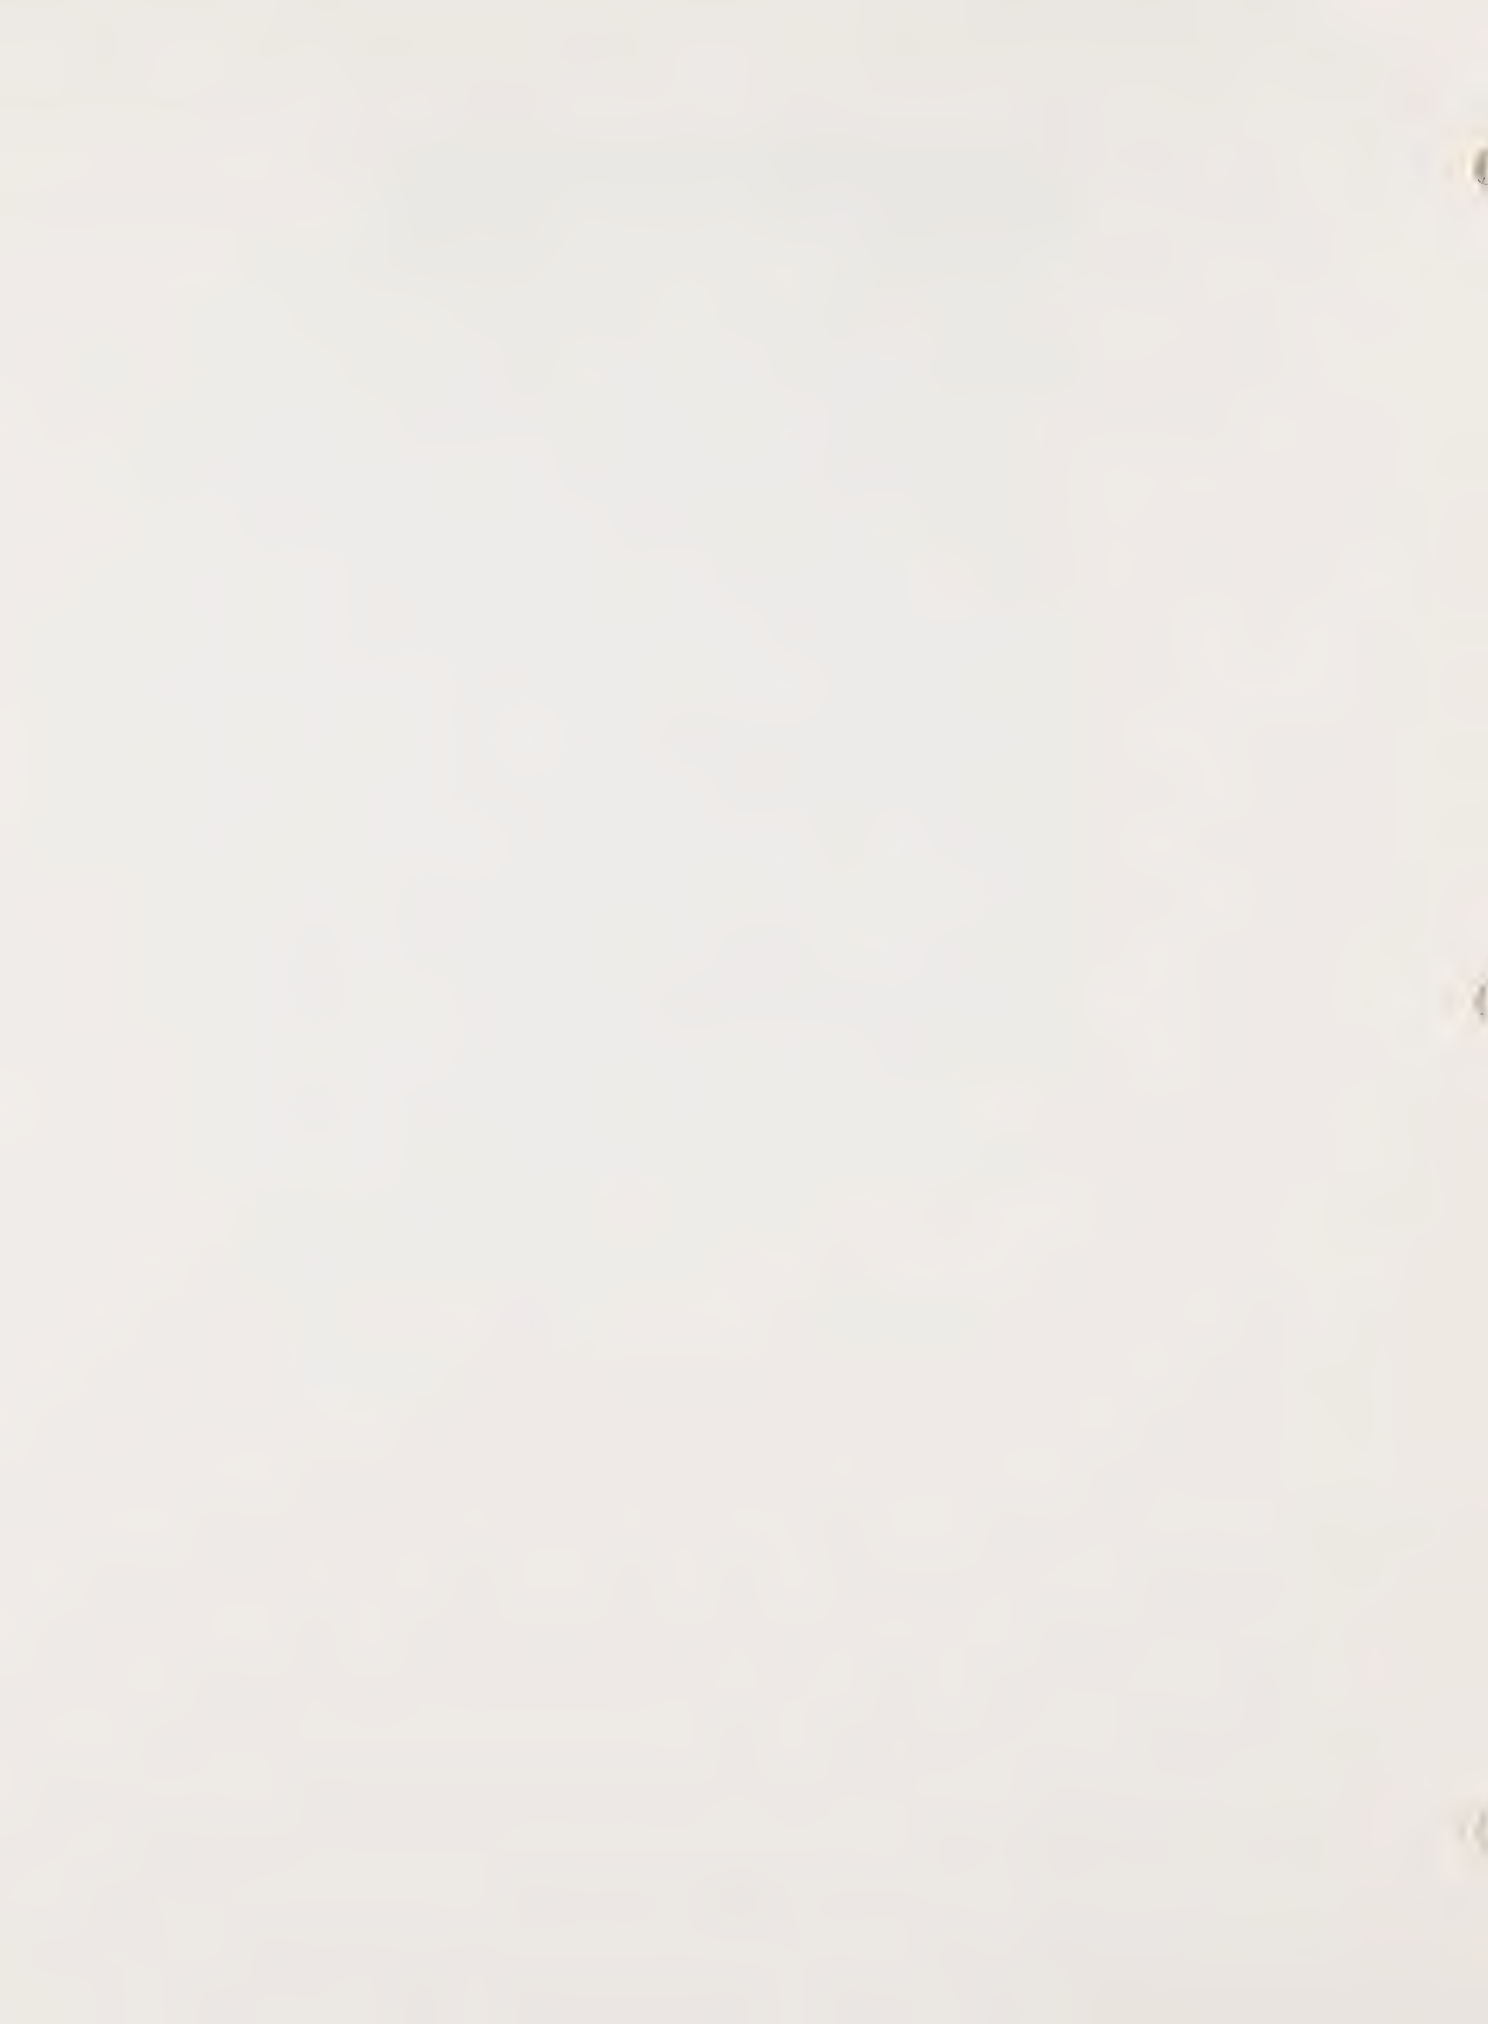

Subarea 3 first needs to rid itself of those residential care beds that are not being utilized on a regular basis. Once Subarea 1 has received enough clients to raise its utilization rate to a sufficient level perspective clients should be directed towards facilities located in Subarea 3. In this manner, the utilization level of Subarea 3 will be raised, but only after Subarea 1 raises their utilization level, which follows the priority schedule of increasing client population.

Subarea 4's residential care bed status is definitely overconcentrated. As it is inappropriate to delicense beds before they are vacant, the first priority is to lower the subarea's bed utilization rate. This can be accomplished by attrition in that no new clients should be placed into facilities located in this subarea unless absolutely necessary. As clients leave those facilities for various reasons, the utilization rate will drop. Once those beds become vacant, they should be delicensed and relicensed in other subareas which need to increase their licensed bed capacity such as Subarea 2.

SUMMARY OF LICENSED RESIDENTIAL CARE FACILITIES SURVEY

I. INTRODUCTION

In May - July, 1975, Comprehensive Health Planning Association of Santa Clara County and the State Department of Health undertook a joint effort to determine the utilization characteristics of the licensed residential care facilities in Santa Clara County. The study identified the number of licensed facilities offering residential care; the number of beds available, their location; the utilization of such facilities; the kinds of agencies placing and serving clients in licensed residential care facilities; and the geographic origin of those clients utilizing licensed residential care facilities in Santa Clara County. Such data, it was felt, would be an essential first step in the planning for residential care services, which includes as one of its objectives, assuring an adequate number of facilities and beds.

II. SURVEY PROCESS

A comprehensive list of all state and county licensed residential care facilities in Santa Clara County was developed. (See Data Sources in Appendix A). Licensed foster homes for children, of which there are about 300 in Santa Clara County, were not included. This list provided us with the total number of facilities which was 406, with a total licensed bed capacity of 5,103. A further breakdown of these figures showed 298 facilities with 1,433 beds licensed for six beds and under; and 108 facilities with 3,670 beds licensed for seven beds and over.

Survey questionnaires (see Appendix E) were mailed to the licensee of

each residential care facility by the State Department of Health and returned to Comprehensive Health Planning Association for tabulation and analysis. Extensive phone follow-up was undertaken to complete some of the returned forms which, for a variety of reasons, were not filled out correctly. Data was collected from 355 (87.4%) of the facilities. These account for 4,542 (89%) of the licensed bed capacity in the County. A further breakdown showed 265 facilities with 1,277 beds reporting for six beds and under; and 90 facilities with 3,265 beds for seven beds and over.

III. DATA TABULATIONS

The data was tabulated and grouped by County Planning Areas (see Appendix B). Certain planning areas were grouped together to give a summary of an area total (noted by @) which roughly corresponds to certain city boundaries (see Appendix A).

Five different tabulations were compiled and are presented in this summary report:

1. 1975 INVENTORY OF LICENSED RESIDENTIAL CARE FACILITIES BY SANTA CLARA COUNTY PLANNING AREAS

In this tabulation each facility is identified by city and census tract location. This allows the data presently tabulated by county planning areas to be displayed by other categories such as municipalities or county statistical areas.

2. 1974 CLIENT UTILIZATION DATA OF LICENSED RESIDENTIAL CARE FACILITIES BY SANTA CLARA COUNTY PLANNING AREAS

The data in this tabulation indicates the annual utilization of licensed residential care facilities. Most significantly, use of the estimated number of patient days and estimated occupancy could provide some clues as to areas of the county which are either overbedded or underbedded.

3. CENSUS BY CLIENT CATEGORIES IN LICENSED RESIDENTIAL CARE
FACILITIES BY SANTA CLARA COUNTY PLANNING AREAS, JUNE 1975

This tabulation identifies the number of facilities serving the various types of clients which utilized licensed residential care facilities. Also, the tabulation indicates the number and type of clients utilizing licensed residential care facilities at one point in time, June 1975.

4. PLACING AND SERVING AGENCY BY CLIENT CATEGORY IN LICENSED
RESIDENTIAL CARE FACILITIES BY SANTA CLARA COUNTY PLANNING
AREAS, JUNE 1975

The variety of placing and serving agencies utilizing licensed residential care facilities in Santa Clara County as displayed in this tabulation, the number of clients placed and served by any one particular type of agency is broken out by client category to provide further insight into how people come to utilize specific residential care services.

5. ORIGIN BY CLIENT CATEGORY IN LICENSED RESIDENTIAL CARE FACILITIES
BY SANTA CLARA COUNTY PLANNING AREAS, JUNE 1975

The data presented in this tabulation relates to the geographic origin of clients by client category. The primary focus is to: 1) identify municipalities within Santa Clara County generating clients and 2) identify the number of clients coming from other counties within California.

Complete sets of the data tabulations, facility by facility, and planning area by planning area, are available from Comprehensive Health Planning Association of Santa Clara County, upon request.

IV. SURVEY FINDINGS, JUNE 1975

The following is a summary of the survey findings showing the utilization and distribution of licensed residential care facilities. These findings will be helpful in future determination of needs regarding: number, type, location and bed capacity of licensed residential care facilities. The findings report will follow in the order of the five tabulations summarized in Section III, page A-6.

1. 1975 INVENTORY OF LICENSED RESIDENTIAL CARE FACILITIES BY SANTA CLARA COUNTY PLANNING AREAS

A. Location of facilities

The location of each facility was shown by census tract and city. This enabled the data to be tabulated and ranked according to the 25 county planning areas. County planning areas are groupings of census tracts used for planning purposes by the Santa Clara County Planning Department. Some planning areas cross city limit boundaries (see Appendix B for census tract groupings and map).

B. Number of facilities

According to the master list developed from the State and County licensing agencies, there were 406 residential care facilities located in Santa Clara County (100%). The three top ranking planning areas in number of facilities were:

- 1) 181 facilities were located in the San Jose Planning Area (44.6%), encompassing the central downtown and San Jose State campus areas.
- 2) 32 facilities were located in the Campbell Planning Area (7.9%), encompassing portions of the cities of Campbell and San Jose.
- 3) 30 facilities were located in the Alum Rock Planning Area (7.4%), encompassed within the City of San Jose.

C. Licensed bed capacity

There was a licensed bed capacity of 5,103 in Santa Clara County (100%). The following figures represent the three planning areas that ranked highest according to the number of licensed beds.

- 1) 2,053 licensed beds were located in the San Jose Planning Area (40.2%).
- 2) 443 licensed beds were located in the Palo Alto Planning Area (8.7%).
- 3) 425 licensed beds were located in the Mountain View-Los Altos Planning Area (8.3%).

Both Palo Alto and Mountain View-Los Altos Planning Areas had a high number of beds in large facilities of 7 or more beds which accounted for these planning areas ranking so high.

D. Small family homes

There were 298 (73.4% of the county total number of facilities) small family homes licensed for six beds and under with a licensed bed capacity of 1,433 (28.1% of the county total number of beds). The three top ranking planning areas were:

Facilities

- 1) 119 facilities were located in the San Jose Planning Area (39.9%).
- 2) 27 facilities were located in the Campbell Planning Area (9.1%).
- 3) 22 facilities were located in the Alum Rock Planning Area (7.4%).

Licensed beds

- 1) 617 licensed beds were located in the San Jose Planning Area (43.1%).

- 2) 132 licensed beds were located in the Campbell Planning Area (9.2%).
- 3) 97 licensed beds were located in the Alum Rock Planning Area (6.8%).

E. Large family homes

There were 108 (26.4% of the county total number of facilities) large family homes licensed for seven beds and over with a licensed bed capacity of 3,670 (71.9% of the county total number of beds). The three top ranking planning areas were:

Facilities

- 1) 62 facilities were located in the San Jose Planning Area (57.4%).
- 2) 8 facilities were located in the Alum Rock Planning Area (7.4%).
- 3) 7 facilities were located in the Mountain View-Los Altos Planning Area (6.5%).

Licensed beds

- 1) 1,436 licensed beds were located in the San Jose Planning Area (39.1%).
- 2) 386 licensed beds were located in the Palo Alto Planning Area (10.5%).
- 3) 348 licensed beds were located in the Mountain View-Los Altos Planning Area (9.5%).

Palo Alto had only three facilities, but one, (Channing House) had a 364 bed capacity which explains why it ranked second in number of licensed beds. Although Alum Rock had 8 facilities, the largest had 55 licensed beds. San Jose had 62 facilities but only one (Milo Arms) had a licensed bed capacity of 100 or over. Mountain View-Los Altos had 7 facilities, two of which (Pilgrim Haven Home and Seven Oaks Residential Park) had over 100 beds, which caused its ranking of number three.

F. Ownership

Facility ownership was divided into three categories. The vast majority of facilities were proprietary, 342 (84%), 16 (3.9%) were non-profit and one (.2%) was County owned (the Santa Clara County Evaluation and Referral Unit in the Agnew Planning Area). Of the 406 total facilities, we were unable to determine the type of ownership of 47 (11.5%) facilities.

G. Licensure

There were 406 total facilities licensed (100%), 219 were County licensed (53.9%) and 187 were State licensed (46.1%). A further breakdown of the data showed:

- 1) 298 (100%) facilities of six beds or under with 184 (61.7%) County licensed and 114 (38.3%) State licensed.
- 2) 108 (100%) facilities of seven beds or over with 35 (32.4%) County licensed and 73 (67.6%) State licensed.

2. 1974 CLIENT UTILIZATION DATA OF LICENSED RESIDENTIAL CARE FACILITIES BY SANTA CLARA COUNTY PLANNING AREAS

This data was a tabulation of the number of clients that were served by each facility according to their type of disability. This data was reported by the licensee of each facility for the time period, January 1, 1974 to January 1, 1975. The research staff used these figures to calculate the estimated number of patient or client days and the estimated percent of occupancy for 1974. These two figures can be helpful in determining the future needs of number and location of facilities. The estimated patient or client days in 1974 for Santa Clara County was 1,280,370. The estimated percent occupancy for the County was 83.7%.

In future surveys, we would recommend that the annual number of patient or client days be asked of each facility, as too many assumptions were made in estimating patient or client days and occupancy to make this table significant.

3. CENSUS BY CLIENT CATEGORIES IN LICENSED RESIDENTIAL CARE FACILITIES BY SANTA CLARA COUNTY PLANNING AREAS, JUNE 1975

The seven client categories were:

Mentally Disabled
Developmentally Disabled
Physically Disabled
Aged
Alcohol
Drug
Dependent and Delinquent Youth

(See Appendix E for definitions).

A. Facilities

- 1) A high percentage of the facilities of each client category are located in the San Jose Planning Area. These percentages range from 41% to 57% of the total number of facilities in each category. Edenvale and Gilroy Planning Areas had the same number of facilities for dependent and delinquent youth as did San Jose.
- 2) The planning areas ranking second in number of facilities per client category were:
 - a) Alum Rock for the mentally disabled (19.8%) and alcohol abusers (11.4%).
 - b) Milpitas for the drug abusers (28.6%).
 - c) Alum Rock and Santa Clara for the developmentally disabled (6.1%).
 - d) Cupertino for the physically disabled (17.0%).
 - e) Campbell and Almaden for the dependent and delinquent youth (12.5%).
 - f) Campbell for the aged (8.9%).

- 3) Some facilities did not report the type of clients they served. These numbered 57 (28 or 49.1% in San Jose alone).

B. Clients by number and type

San Jose had the most clients residing in their planning area (39.9%). San Jose had the greatest number of clients who were mentally, developmentally and physically disabled, alcoholic and drug abusers.

- 1) Los Gatos had the largest aged population in facilities.
- 2) Gilroy had the largest number of dependent and delinquent youth in facilities.
- 3) Santa Clara County had an occupancy rate of 82%. The City of San Jose was slightly higher at 84.7%.

4. PLACING AND SERVING AGENCY BY CLIENT CATEGORY IN LICENSED RESIDENTIAL CARE FACILITIES BY SANTA CLARA COUNTY PLANNING AREAS, JUNE 1975

The placing agency was primarily responsible for placing the client in the present facility. The agency serving the client was providing services to the client at the time that the survey was taken. (See Appendix E)

- A. In the County, the majority of clients were reported to be placed (1,390) and served (1,379) privately (see Appendix D for explanations of placement categories). The Santa Clara County Department of Social Services (DSS) placed (738) and served (1,084), the next largest number of clients. Percentages would be invalid in this tabulation because in a response which indicated that more than one agency was involved in placing or serving a client, the agency was counted once for each appropriate category.

- 1) The largest number of clients placed and served privately were the aged, and with DSS it was the mentally disabled (MD) and developmentally disabled (DD) clients. The physically disabled (PD) were placed and served by both. The numbers of clients were reported as follows:

- a) Private

Aged - 1,164 clients were placed and 1,164 were being served.

Physically disabled - 49 clients were placed and 37 were being served.

- b) Department of Social Services (DSS)

Mentally disabled - 360 clients were placed and 483 were being served.

Developmentally disabled - 112 clients were placed and 129 were being served.

Physically disabled - 40 clients were placed and 53 were being served.

- 2) The majority of alcohol and drug abuse clients were placed and served by miscellaneous agencies and dependent and delinquent youths (D & DY) by out-of-county public agencies.

- a) Miscellaneous agencies

Alcohol abusers - 279 clients were placed and 206 were being served.

Drug abusers - 58 clients were placed and 65 were being served.

- b) Out-of-county agencies

Dependent and delinquent youths - 38 clients were placed and 29 were being served.

- B. The same trends were noted in the placing and serving of

clients in the small and large family homes, with the exception of the Veterans Administration placing and serving more mentally disabled clients in small family homes than the Department of Social Services.

5. ORIGIN BY CLIENT CATEGORY IN LICENSED RESIDENTIAL CARE FACILITIES
BY SANTA CLARA COUNTY PLANNING AREAS, JUNE 1975

- A. The majority of client's origin was from within Santa Clara County (49%) and the majority of those came from the City of San Jose (67%). This figure from San Jose may be inflated due to the operators marking San Jose as the client's hometown when no hometown was known.
- B. The percentage breakdown of client origin were as follows:
 - 1) Within Santa Clara County - 49%.
 - 2) Other counties within California - 24.9%.
 - 3) Out-of-state - 7.3%.
 - 4) Unknown - 18.8%.
- C. All client categories had a majority of persons originating from within Santa Clara County except the dependent and delinquent youth and the category of "other" (mostly children with behavior problems), who came from other counties within California.
- D. The major other counties of client origin were San Mateo (18%), San Francisco (16.1%), and Alameda (11.1%).

TABULATION 1

1975 Inventory of Licensed Residential Care Facilities
by Santa Clara County Planning Areas

EXPLANATION OF "1975 RESIDENTIAL CARE FACILITIES INVENTORY" FORM

COUNTY PLANNING AREAS - Grouping of census tracts used as planning areas by the Santa Clara County Planning Department. (see Appendix B for census tract groupings).

CITY - Municipal location of facility according to facility's address (see Coding Footnotes for explanation of codes used).

CENSUS TRACT NUMBER - The census tract location of each facility according to the facility's address using the 1970 census tracts (Source: County Census Tract Street Index, 1973 Edition).

HEALTH SERVICE AREA NUMBER - The health service area location of each facility according to their census tract location. (see Appendix C for census tract groupings). Health Service Areas are groupings of census tracts that are used for estimating the need for the four categories of health services and facilities which fall under the State Certificate of Need Law, Chapter 1451, Statutes 1969. They are also used in determining the State's priorities for health facilities construction grants and loans under the Federal "Hill-Burton" and State programs. Currently, residential care facilities are not included in this mandated process or any other similar kind of process used to estimate on areas need for health services and facilities.

LICENSURE - The governmental licensing agency which issued the facility's current license (see Coding Footnotes for explanation of codes used).

OWNERSHIP - The type of ownership each facility operates under. (see Coding Footnotes for explanation of codes used).

NUMBER OF FACILITIES - The number of facilities licensed in 1975. Each facility listed was counted as (one) unless otherwise noted. A facility was not counted in the total if the licensed bed capacity was not included in the total (see next category). The total number of licensed facilities, however, does include those facilities for which other data was unavailable.

LICENSED BED CAPACITY - The number of beds each facility was licensed for in 1975. Where the number is enclosed in parenthesis (Example: (4)), that number is not included in the totals. The symbol - denotes facility was not operational in 1975. (refer to footnotes regarding each facility, see Appendix A). The total licensed bed capacity, however, does include those facilities for which other data was unavailable.

1975 Inventory of Licensed Residential Care Facilities
by Santa Clara County Planning Areas
Summary

| AREA LOCATION | NUMBER OF FACILITIES | LICENSED BED CAPACITY |
|-------------------------------|-------------------------|--------------------------|

TABULATION 2

1974 Client Utilization Data
of Licensed Residential Care Facilities
by Santa Clara County Planning Areas

EXPLANATION OF "1974 CLIENT UTILIZATION DATA" FORM

CITY - Municipal location of facility according to facility's address (see Coding Footnotes for explanation of codes used).

LICENSURE - The governmental licensing agency which issued the facility's current license (see Coding Footnotes for explanation of codes used).

NUMBER OF FACILITIES - 1975 - The number of facilities licensed in 1975. Each facility listed was counted as (one) unless otherwise noted. A facility was not counted in the totals if the licensed bed capacity of the facility was not included in the totals (see next category). The total number of licensed facilities, however, does include those facilities for which other data was unavailable. An asterisk (*) denotes those facilities which indicated that they were serving children (17 years and younger).

LICENSED BED CAPACITY - The number of beds each facility was licensed for in 1975. Where the number is enclosed in parenthesis (Example: (4)), that number was not included in the totals. The symbol - denotes facility was not operational in 1975. (refer to footnotes regarding each facility, see Appendix A). The total licensed bed capacity, however, does include those facilities for which other data was unavailable.

NUMBER OF FACILITIES - 1974 - The number of licensed facilities that responded with 1974 utilization data. Each facility listed was counted as (one) unless otherwise noted. A facility was not counted in the totals of the licensed bed capacity if the facility was not included in the totals (see next category).

LICENSED BED CAPACITY - 1974 - The number of licensed beds for those facilities responding with 1974 utilization data. For those facilities not responding with 1974 data, a parenthesis was put around the licensed bed capacity (Example: (4)) and not counted in the totals. The symbol - denotes that the facility was not in operation in 1974 (refer to the footnotes regarding each facility).

NUMBER AND TYPES OF CLIENTS SERVED - 1974 - The amount and type of clients served within each facility during any part of the 1974 calendar year. The response as to type of client served was based on the definitions supplied in the survey instructions (see Appendix E, "Annual Report of Licensed Residential Care Facilities").

1974 ADMISSIONS - The total number of clients each facility admitted during the year 1974.

1974 ESTIMATED PATIENT DAYS - Estimated by taking the maximum number of patient days possible in each facility (licensed bed capacity x 365) and multiplying it by the 1974 estimated percent occupancy. (see next category).

1974 ESTIMATED PERCENT OCCUPANCY - The occupancy level for those facilities reporting 1974 utilization data computed as follows: (number of clients residing in the facility 4/75 x 30 days) ÷ (licensed bed capacity of the facility x 30 days). It was assumed that the occupancy level for one month, 4/75, was the same throughout the year of 1974. Figures marked with an asterisk (*) denotes that the occupancy was derived through other means.

1974 Client Utilization of Licensed Residential Care Facilities

OF SANTA CLARA COUNTY, INC.
1600 Willow Street San Jose, California
(408) 265-0200 95125

TABULATION 3

Census by Client Categories
in Licensed Residential Care Facilities
by Santa Clara County Planning Areas, June 1975

EXPLANATION OF "CLIENT CENSUS, 6/75" FORM

CITY - Municipal location of facility according to facility's address (see Coding Footnotes for explanation of codes used).

LICENSURE - The governmental licensing agency which issued the facility's current license (see Coding Footnotes for explanation of codes used).

NUMBER OF FACILITIES - 1975 - The number of facilities licensed in 1975. Each facility listed was counted as (one) unless otherwise noted. A facility was not counted in the totals if the licensed bed capacity of the facility was not included in the totals (see next category). The total number of licensed facilities, however, does include those facilities, for which other data was unavailable. An asterisk (*) denotes those facilities which indicated that they were serving children (17 years and younger).

LICENSED BED CAPACITY - The number of beds each facility was licensed for in 1975. Where the number is enclosed in parenthesis (Example: (4)), that number was not included in the totals. The symbol - denotes facility was not operational in 1975. (refer to footnotes regarding each facility, see Appendix A). The total licensed bed capacity, however, does include those facilities for which other data was unavailable.

FACILITY BY TYPE OF CLIENT SERVED - This indicates the response from operators when asked to identify the type of clients residing in their facility, at the time of survey, based upon the definitions supplied in the survey instructions (see Appendix E, "Annual Report of Licensed Residential Care Facilities"). If a facility served more than one type of client, it was counted once for each type of client category served. Therefore, the total number of facilities in this section will be greater than total number of facilities licensed.

NUMBER AND TYPE OF CLIENTS RESIDING IN FACILITY - The number of clients residing in residential care facilities at the time of the survey by the

type of client served based upon the definitions supplied in the survey instructions (see Appendix E, "Annual Report of Licensed Residential Care Facilities") data.

CURRENT PERCENT OCCUPANCY - The level of occupancy for those facilities reporting client data. The total percentage occupancy figures based on the licensed bed capacity for those facilities which reported 1975 data.

NUMBER OF AGENCIES SERVING CLIENTS IN FACILITY - The number of types of agencies serving clients in facilities which reported data (see Appendix D for the category of types of agencies serving clients in residential care facilities and the agencies within each of those categories).

TABULATION 4

Placing and Serving Agency by Client Category
in Licensed Residential Care Facilities
by Santa Clara County Planning Areas
June 1975

EXPLANATION OF "PLACING AND SERVING AGENCY BY CLIENT CATEGORY, 6/75" FORM

CITY - Municipal location of facility according to facility's address (see Coding Footnotes for explanation of codes used).

LICENSURE - The governmental licensing agency which issued the facility's current license (see Coding Footnotes for explanation of codes used).

NUMBER OF FACILITIES - 1975 - The number of facilities licensed in 1975. Each facility listed was counted as (one) unless otherwise noted. A facility was not counted in the totals if the licensed bed capacity of the facility was not included in the totals (see next category). The total number of licensed facilities, however, does include those facilities for which other data was unavailable.

LICENSED BED CAPACITY - The number of beds each facility was licensed for in 1975. Where the number is enclosed in parenthesis (Example: (4)), that number was not included in the totals. The symbol - denotes facility was not operational in 1975. (refer to footnotes regarding each facility, see Appendix A). The total licensed bed capacity, however, does include those facilities for which other data was unavailable.

NUMBER OF CLIENTS RESIDING IN FACILITY - The total number of all clients residing in residential care facilities.

CLIENT CATEGORY TOTAL - The total number of clients residing in residential care facilities per client category. (see Appendix E, "Annual Report of Licensed Residential Care Facilities" for definitions used in categorizing clients).

NUMBER OF CLIENTS PLACED BY TYPE OF AGENCY - The number of clients placed into residential care facilities by client category according to the type of placement agency that did the placement. Agencies listed by operators,

administrators, etc., were so varied and diverse that they were categorized into 11 different groups. (see Appendix D for a listing of agencies that were grouped together and categorized). A response which indicated that more than one type of agency was involved in the placement of a client was counted once for each appropriate category. Thus, the total number of clients placed by all agencies will in some instances be greater than the total number of clients reported to have been residing in residential care facilities at the time of the survey.

NUMBER OF CLIENTS SERVED BY TYPE OF AGENCY - The number of clients being served or assisted in residential care facilities by client category according to type of serving agency. Again, the responses of operators and administrators were so diverse that they were categorized into the same 11 different groups (see Appendix D). A response which indicated that more than one type of agency was serving a client was counted once for each appropriate category. Thus, the total number of clients served by all agencies will in some instances be greater than the total number of clients reported to have been residing in residential care facilities at the time of the survey.

Placing and Serving Agency by Client Category
in Licensed Residential Care Facilities

COMPREHENSIVE HEALTH PLANNING ASSOCIATION
OF SANTA CLARA COUNTY, INC.
1600 Willow Street San Jose, California
(408) 265-0200 95125

TABULATION 5

Origin by Client Category
in Licensed Residential Care Facilities
by Santa Clara County Planning Areas
June 1975

EXPLANATION OF "ORIGIN BY CLIENT CATEGORY, 6/75" FORM

CITY - Municipal location of facility according to facility's address (see Coding Footnotes for explanation of codes used).

LICENSE - The governmental licensing agency which issued the facility's current license (see Coding Footnotes for explanation of codes used).

NUMBER OF FACILITIES - 1975 - The number of facilities licensed in 1975. Each facility listed was counted as (one) unless otherwise noted. A facility was not counted in the totals if the licensed bed capacity of the facility was not included in the totals (see next category). The total number of licensed facilities, however, does include those facilities for which other data was unavailable.

LICENSED BED CAPACITY - The number of beds each facility was licensed for in 1975. Where the number is enclosed in parenthesis (Example: (4)), that number was not included in the totals. The symbol - denotes facility was not operational in 1975. (refer to footnotes regarding each facility, see Appendix A). The total licensed bed capacity, however, does include those facilities for which other data was unavailable.

NUMBER OF CLIENTS RESIDING IN FACILITY - The total number of all clients residing in residential care facilities.

CLIENT CATEGORY TOTAL - The total number of clients residing in residential care facilities per client category. (see Appendix E, "Annual Report of Licensed Residential Care Facilities" for definitions used in categorizing clients).

CLIENT ORIGIN - This indicates the response given by residential care operators and administrators when asked to identify each client's last hometown prior to any out-of-home placement. (see Appendix E, "Annual

Report of Licensed Residential Care Facility"). In some instances, the response given may be the client's place of residence prior to being placed into the facility being surveyed and not the clients original hometown.

SANTA CLARA COUNTY TOTAL - This represents the number of clients, by client category, which were identified as coming from within Santa Clara County. This total has been distributed out by the 15 municipalities within Santa Clara County.

OTHER COUNTIES WITHIN CALIFORNIA - This represents the number of clients, by client category, which were identified as coming from California counties, other than Santa Clara County. The total figures have been broken out by client category, county, by county in the "Client Origin from Other Counties Within California, 6/75" form which is not included in this summary report of the survey.

OUT OF CALIFORNIA - This represents the number of clients, by client category, which were identified as coming from other states or counties.

UNKNOWN - This represents the number of clients, by client category, which their hometown status was not known. This was due in part to the fact that some operators and administrators simply did not know or chose to leave this question unanswered.

| C | - Santa Clara County Department of Social Services |

EXPLANATION OF FOOTNOTES

- a) @ This denotes subtotal categories which are groupings of County Planning areas and are organized as follows:

SAN JOSE TOTAL INCLUDES:

| | |
|--------------------------|-----|
| San Jose, Planning Area | - A |
| Almaden, Planning Area | - R |
| Alum Rock, Planning Area | - C |
| Alviso, Planning Area | - F |
| Berryessa, Planning Area | - D |
| Edenvale, Planning Area | - S |
| Evergreen, Planning Area | - B |

SANTA CLARA TOTAL INCLUDES:

| | |
|----------------------------|-----|
| Santa Clara, Planning Area | - H |
| Agnew, Planning Area | - G |

UNINCORPORATED AREA TOTAL INCLUDES:

| | |
|-----------------------------|-----|
| Coyote, Planning Area | - T |
| Diablo Range, Planning Area | - Y |
| Lexington, Planning Area | - Q |
| Llagas-Uvas, Planning Area | - U |
| San Martin, Planning Area | - W |

- b) The phrases "data not available", or "data unavailable" refers to the fact that facility characteristic data is not known.

The phrases "data excluded" refers to the fact that certain facility characteristic data was not recorded in the inventory, although possibly know, because facility was not licensed and operational during the specific time periods selected for the survey.

1. 1974 data not available; licensed by the State as of June 1975; previously licensed by the County.
2. 1974 data excluded; facility not licensed in 1974; currently licensed as of February 1975.
3. Data not available; facility not licensed in 1974; currently licensed.

4. Facility moved to Fresno location June 1975; 1974 data noted in San Jose, Planning Area - A, See Footnote 40.
5. 1974 data excluded; facility not licensed in 1974; currently licensed.
6. Data not available; facility not licensed in 1974; currently licensed.
7. Data not available; facility licensed with the State until October 1975; then transferred to County licensure.
8. Facility's licensed bed capacity increased to 30 as of April 1975.
9. Data not available; facility licensed in 1974 under the name of Casa Bonita-Campbell; currently licensed as of April 1975.
10. Data not available; facility licensed in 1974; currently licensed.
11. Data not available; facility not licensed in 1974; currently licensed.
12. 1974 data excluded; facility not licensed in 1974; currently licensed as of February 1975.
13. 1974 data not available; facility licensed in 1974; currently licensed.
14. 1974 data excluded; facility not licensed in 1974; relicensed March 1975.
15. 1974 data excluded; facility not licensed in 1974; currently licensed.
16. Facility's 1974 location; moved to San Martin, Planning Area-W April 1975, see Footnote 85 for 1975 data.
17. 1974 Data excluded; facility not licensed in 1974; current data unavailable, facility licensed as of October 1975.
18. Data unavailable; facility licensed in 1974; currently licensed.
19. 1974 not available; facility licensed in 1974 currently licensed.
20. Data not available; facility closed December 1974.

ANNUAL REPORT OF LICENSED RESIDENTIAL CARE FACILITIES

STATE OF CALIFORNIA—HEALTH AND WELFARE AGENCY

EDMUND G. BROWN JR., Governor

DEPARTMENT OF HEALTH

714-744 P STREET

SACRAMENTO, CALIFORNIA 95814

May 16, 1975

Dear Administrator:

Enclosed you will find official forms required for the annual Report of Residential Care Facilities, a Client Origin Report, and Instructions for Completing Forms. Will you kindly complete these forms from your records, following the instructions carefully.

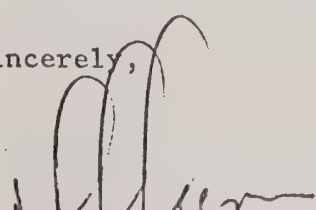

Please return the completed forms by June 1, 1975 to the Comprehensive Health Planning Association (CHPA). A return envelope is enclosed for your convenience. If you need assistance in completing the forms or have questions, please telephone the CHPA office, (408) 265-0200.

The Facilities Licensing Section, State Department of Health and the County Social Services Licensing Unit for Residential Care Homes for adults are working with the Comprehensive Health Planning Association of Santa Clara County in a cooperative effort for completing the annual reports.

The purpose of this annual reporting procedure is to determine client utilization, client origin, client age, and client placement disability for all the 485 licensed residential care facilities in Santa Clara County. Compiling this market information will help determine the need for residential care facilities and help determine if sufficient beds are available for the various disability categories. The final report will be available upon request.

Thank you for your prompt attention to these reports. We expect that they will be of use to you in providing needed residential care services.

Sincerely,

Dennis D. Dunne, Chief
Facilities Licensing Section

ANNUAL REPORT OF RESIDENTIAL CARE FACILITIES

INSTRUCTIONS FOR COMPLETING FORMS

Complete the Report Forms according to the following instructions. Each item on the Report Form relates to the corresponding number in the Instructions.

- | | |
|----------------------------------|--|
| (1) <u>Administrator</u> | The individual designated by the licensee to act on behalf of the licensee in the overall management of the facility. The licensee, if an individual, and the administrator may be one and the same person. |
| (2) <u>Licensee</u> | The individual, partnership, corporation, association, governmental subdivision or other entity, or other organization having the authority and responsibility for the operation of a licensed facility and holding the license. |
| (3) <u>License No.</u> | The identification number given by the licensing agency to the licensee to operate a community care facility and to provide basic services. |
| (4) <u>Capacity</u> | The number of beds licensed at any one time in any licensed facility. |
| (5) <u>Disability Categories</u> | List clients in only one disability category. If a client has two or more disabilities, use only the primary one. |
| (6) <u>Census</u> | The number of clients occupying beds on the date given. |
| (7) <u>Admissions</u> | The number of clients admitted to the facility between the dates given. |
| (8) <u>Total Clients Served</u> | Add Column #6 and Column #7 for total admissions. |
| (9) <u>Discharges</u> | The number of clients leaving the facility between the dates given. |
| (10) <u>Census</u> | The number of clients occupying beds on the date given should equal Column #8 minus Column #9. |
| (11) <u>Total Client Days</u> | The sum of all client days of service provided in your facility during the month of April 1975. Thirty days times the number of beds equals total client days possible or (30 X beds = total possible month days). |
| (12) <u>Mentally Disabled</u> | A disability attributable to a mental illness which leaves the client dependent on others to assist them in the areas of judgment and self-sustaining needs. |

- (13) Developmentally Disabled A disability attributable to mental retardation, cerebral palsy, epilepsy or other handicapping conditions found to be closely related to mental retardation, or to require treatment similar to that required by mentally retarded individuals.
- (14) Physically Disabled A disability attributable to physical incapacitation, paralysis, blindness or other physical handicapping condition.
- (15) Aged Primary reason for placement is due to age 65 or older, or senility at any age. (Other disabling conditions also may be present).
- (16) Alcohol A disability attributable to the excessive use of alcoholic liquors.
- (17) Drug A disability attributable to the practice of taking habit-forming drugs other than alcohol.
- (18) Other Specify other handicapping conditions or reason for placement.
- (19) Sex Use "F" for female and "M" for male.
- (20) Age Give each client's age in years to last birthday.
- (21) Last Hometown The city, and year if known, where the client originated from prior to requiring any out-of-home placement. If the hometown is not known, then use the city where the client has spent the most time during the past several years. If the hometown was out of California, give name of state only.
- (22) Placing Agency The agency that was primarily responsible for placing the client in the present facility. Be as specific as possible. This is usually a social service agency, and may be one of the following:
- a. Community Services Section - San Jose
 - b. Santa Clara County Mental Health Department
 - c. Loma Prieta Regional Center
 - d. Santa Clara County Department of Social Services
 - e. Veterans Administration Hospital - Palo Alto
 - f. Public Guardian of Santa Clara County
 - g. Napa or Agnew State Hospitals

If not placed by an agency, give placement such as:

- a. Private family
- b. Recruited by operator
- c. Self-referred
- d. Conservator - other than Public Guardian
- e. Other - be specific

(23) Agency Serving Client The agency that is presently providing services to the client. This may be a social service agency. It may or may not be the same agency that placed the client. Be specific in your answer.(see above examples).
